What is Zenith?

Designed to look, feel and perform like stone, Zenith is a compact laminate. That means it can be cut and fit on site with no special tools required - and no long and expensive lead times for templating and specialist fitting.

Manufactured for toughness with a 12.5mm thickness and solid, coloured-core composition, Zenith is fully waterproof with a consistent colour all the way through and double-sided decorative finish, making it a great choice for undermount sinks, cutting into bespoke shapes and creating matching shelves or sills.

Since it's super hardwearing with realistic patterns, textures and sleek profile, Zenith makes a great contemporary alternative to stone, marble and quartz – ideal for placement in homes and commercial spaces.

Installation

Fitting Zenith does not call for any special tooling, but we recommend consulting the installation guide at the back of this brochure before you begin, as the method differs slightly from laminate worktop installation.

Antibacterial

Zenith surfaces are manufactured with Antibacterial Protection as standard.

Waterproof

Zenith surfaces are 100% waterproof and ideal for use with undermount sinks.

Hardwearing

Zenith surfaces are super hardwearing, tested to EN438 standards against common causes of wear and damage.

Technical Specifications

We have high standards. Zenith has passed the following rigorous testing:

Property	Standard	Pass
Modulus of elasticity	ISO 178	•
Bending strength	ISO 178	•
Resistance to boiling water	EN 438-2-12	•
Impact resistance (large diameter ball)	EN 438-2-21	•
Resistance to cracking	EN 438-2-24	•
Abrasion resistance	EN 438-2-10	•
Resistance to steam	EN 438-2-14	•
Dry heat resistance 180°	EN 438-2-16	•
Resistance to humidity	EN 12721	•
Scratch resistance	EN 438-2-25	•
Stain resistance groups 1, 2 and 3	EN 438-2-26	•
Colour fastness under artificial light	EN 438-2-27	•
Resistance to cigarette burns	EN 438-2-30	•
Fire rating	EN 13501-1	•
Calorific value	EN ISO 1716	•
Food safe	EN 13130-1	•
Formaldehyde emission	EN 717-2	•
Antibacterial properties	JIS Z 2801	•

Installation

When you buy a Zenith worksurface, your detailed installation guide will be included. You can also find our in-depth installation videos on YouTube by searching “Zenith worktop installation guide.”

We highly recommend reading the installation guide in full before you begin your Zenith installation. Here, we offer an overview of the fitting process and address some commonly asked questions.

Cutting

Zenith worktops are hardwearing and require good quality machinery and clean, sharp cutters to produce a professional finish. This will ultimately save time and effort.

Slow or soft start tools must be at full speed before cutting begins. To cut through the full thickness of the worktop, work in three passes. The first plunge will clear 4mm, the second plunge another 4mm, and the final plunge will cut through the final depth of the material.

Jointing

You can join Zenith surfaces together in either a butt joint or mason's mitre style using biscuit joints and adhesive, with hot melt blocks or G clamps (Figs 1,2,3&4).

Drilling

If drilling through the material, use a sacrificial piece of chipboard on the underside to stop the Zenith surface from flaking. You can drill through the whole of the thickness, or through part – if using a stopped hole, ensure a minimum thickness of 3mm of material remains to remove the risk of cracking.

Profiling Edges

You can remove cut edge sharpness by shaping slightly with a 240 grit sanding block. You can also shape the profile with a router and a pencil round of 1-2mm.

Sinks

Zenith surfaces are ideal for use with inset (Fig 5) and undermount sinks (Fig 6), including Butler and Belfast styles. Please refer both to the Zenith installation guide and your sink manufacturer instructions when fitting.

Drainer Grooves

Drainer grooves are for use with an undermount sink style only. Use a jig and hand router to cut grooves to a maximum of 6mm, then sand to finish. Please refer to the full installation guide and videos for a comprehensive view of the method.

Hob Installation

Zenith surfaces are compatible with most hobs. Most worktops leave a gap between the bottom of the hob and the items immediately beneath, but this gap is decreased due to the 12.5mm thickness of the Zenith surface, so some alterations may be made to plinths to accommodate the lower fit. Please refer to the full installation guide and videos for a comprehensive view of the method.

Oven Installation

Zenith is recommended for single oven installation only. The shelf at the bottom of the unit can be lowered by 20—25mm by removing and refastening further down. The front panel can be trimmed into two; place one above and below to frame the oven.

Finishing

There is no need to polish or oil the surface. For a smooth finish to exposed edges, you can use a palm sander in 180 > 240 > 400 grit ultrafine paper, then apply oil only to the exposed edges. Please refer to the full installation guide and videos for a comprehensive view of the method.

Care and Maintenance

Zenith surfaces are easily maintained with mild detergent and a microfibre cloth. Do not use acidic or abrasive cleaners. Every day spills should be wiped away without delay to protect from potential staining.
